

side effect - causation - compound

symptom - presense - disease

pathway - participation - gene

molecular function - participation - gene

disease - indication - compound

disease - function - gene

disease - association - gene

disease - localization - anatomy

disease - similarity - disease

disease - downregulation - gene

disease - upregulation - gene

disease - presense - symptom

anatomy - localization - disease

anatomy - downregulation - gene

anatomy - expression - gene

anatomy - upregulation - gene

compound - indication - disease

compound - upregulation - gene

compound - binding - gene

compound - target - gene

compound - similarity - compound

compound - causation - side effect

compound - downregulation - gene

cellular component - participation - gene

biological process - participation - gene

perturbation - regulation - gene
