

disease - associates - gene

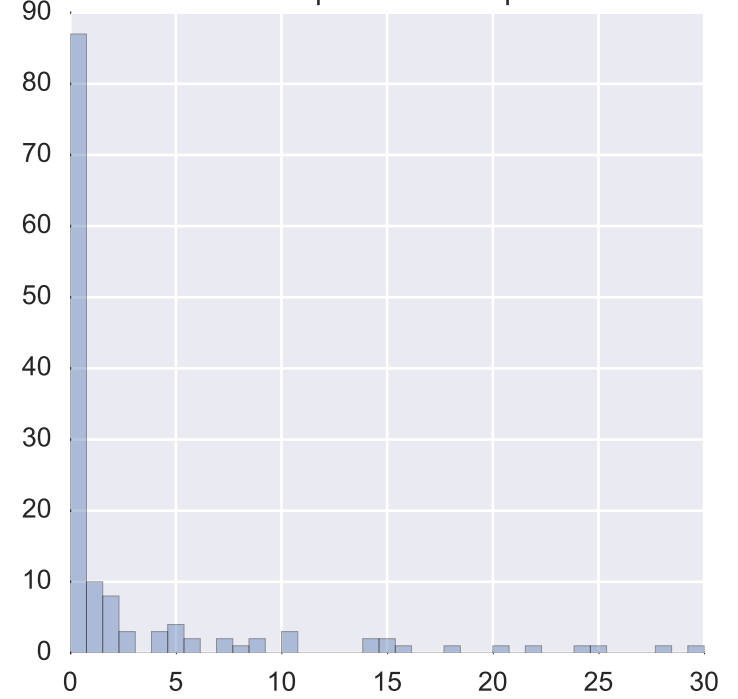

disease - downregulates - gene

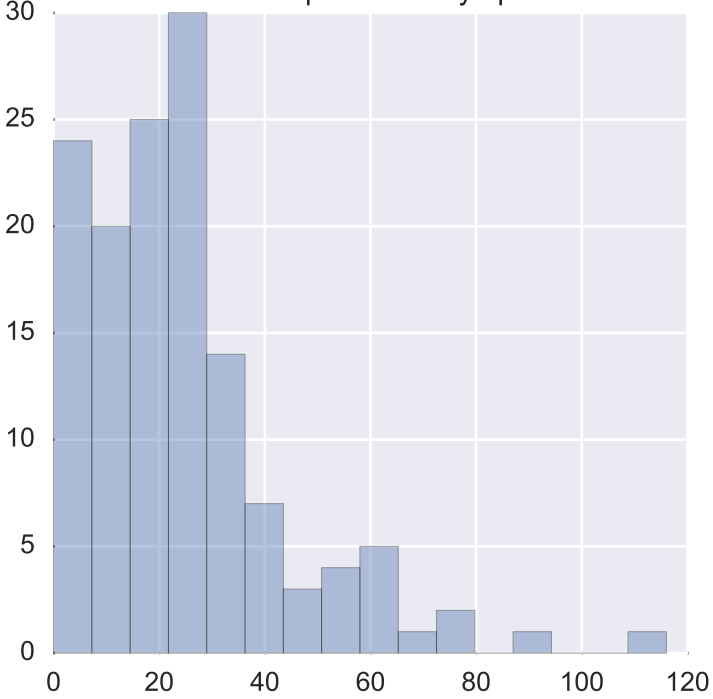

disease - localizes - anatomy

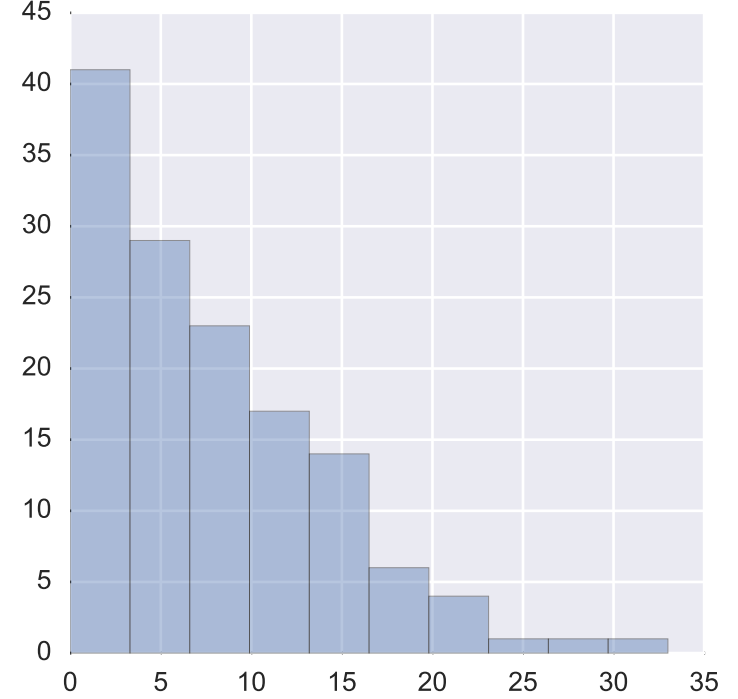

disease - palliates - compound

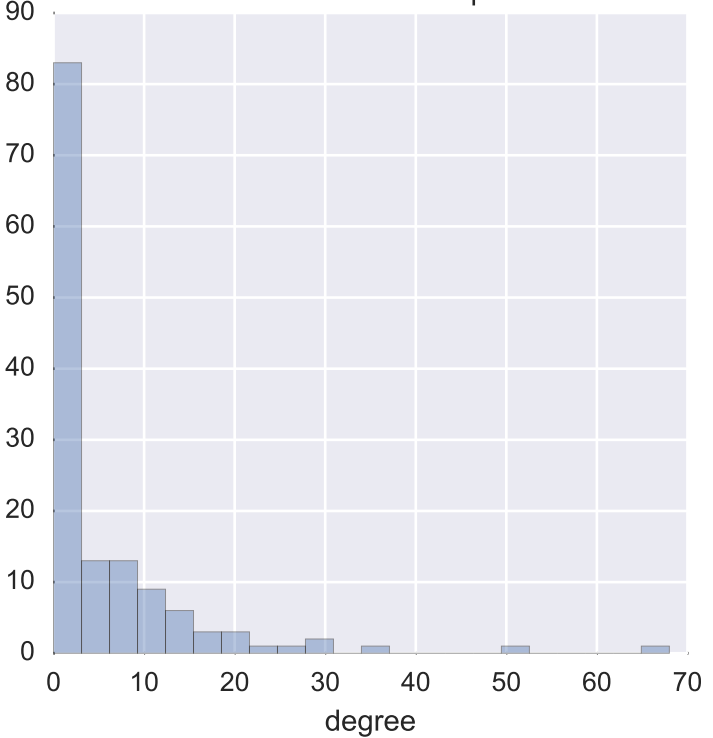

disease - presents - symptom

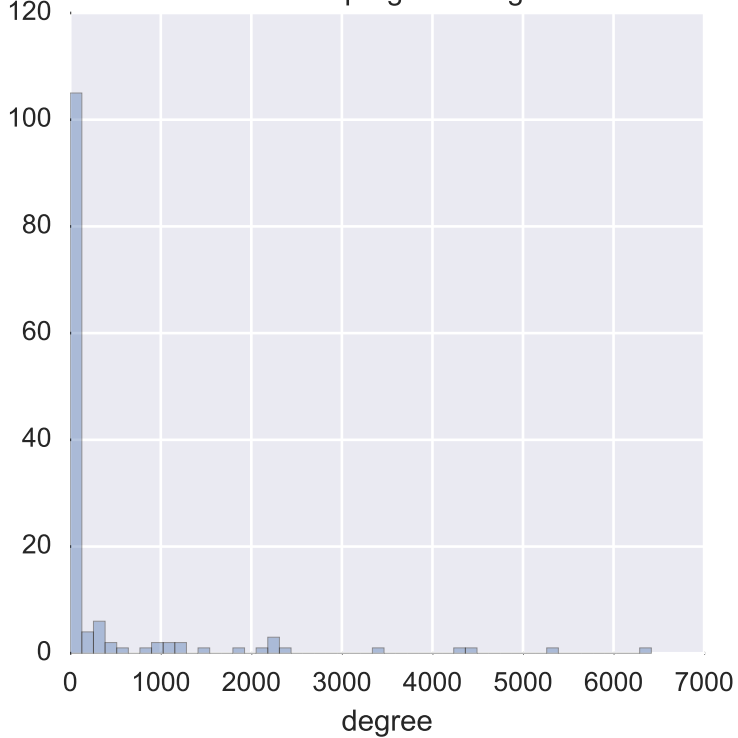

disease - resembles - disease

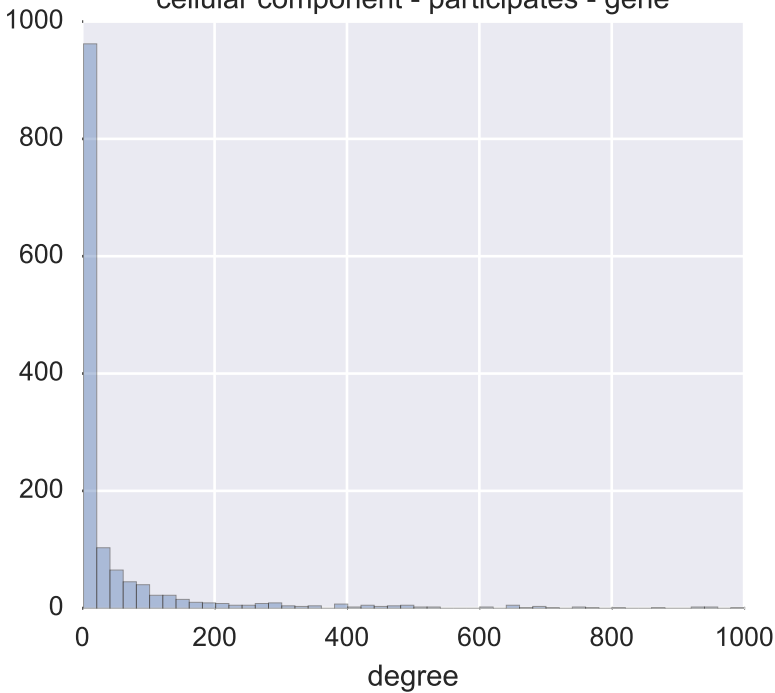

disease - treats - compound

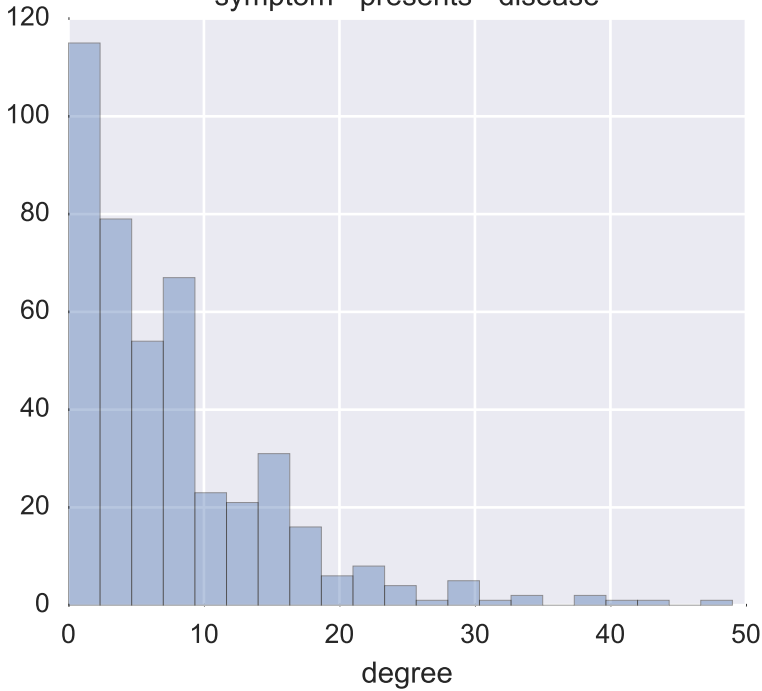

disease - upregulates - gene

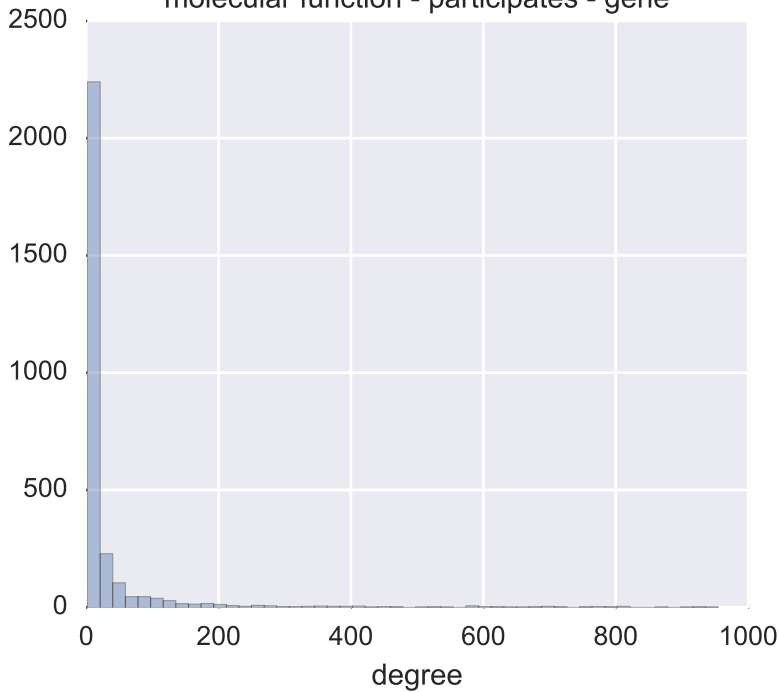

cellular component - participates - gene

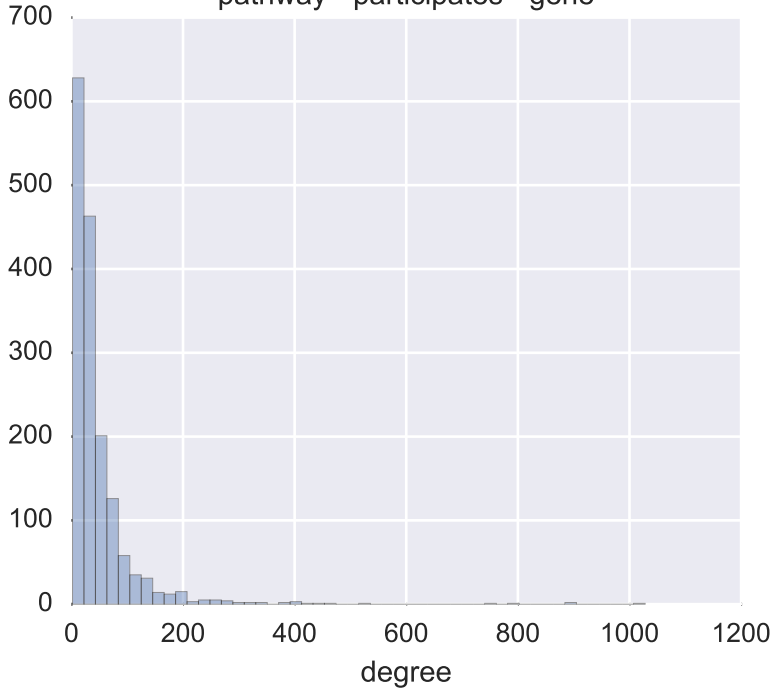

symptom - presents - disease

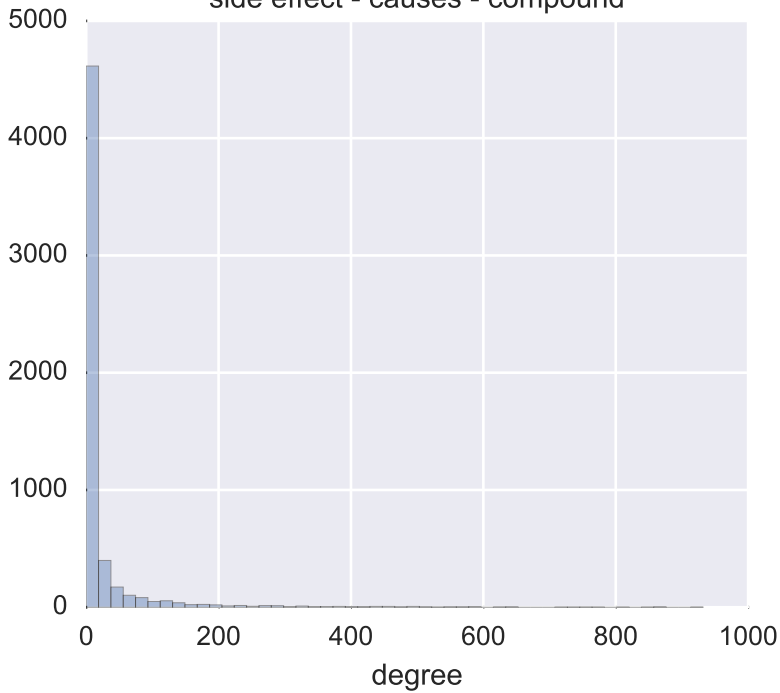

molecular function - participates - gene

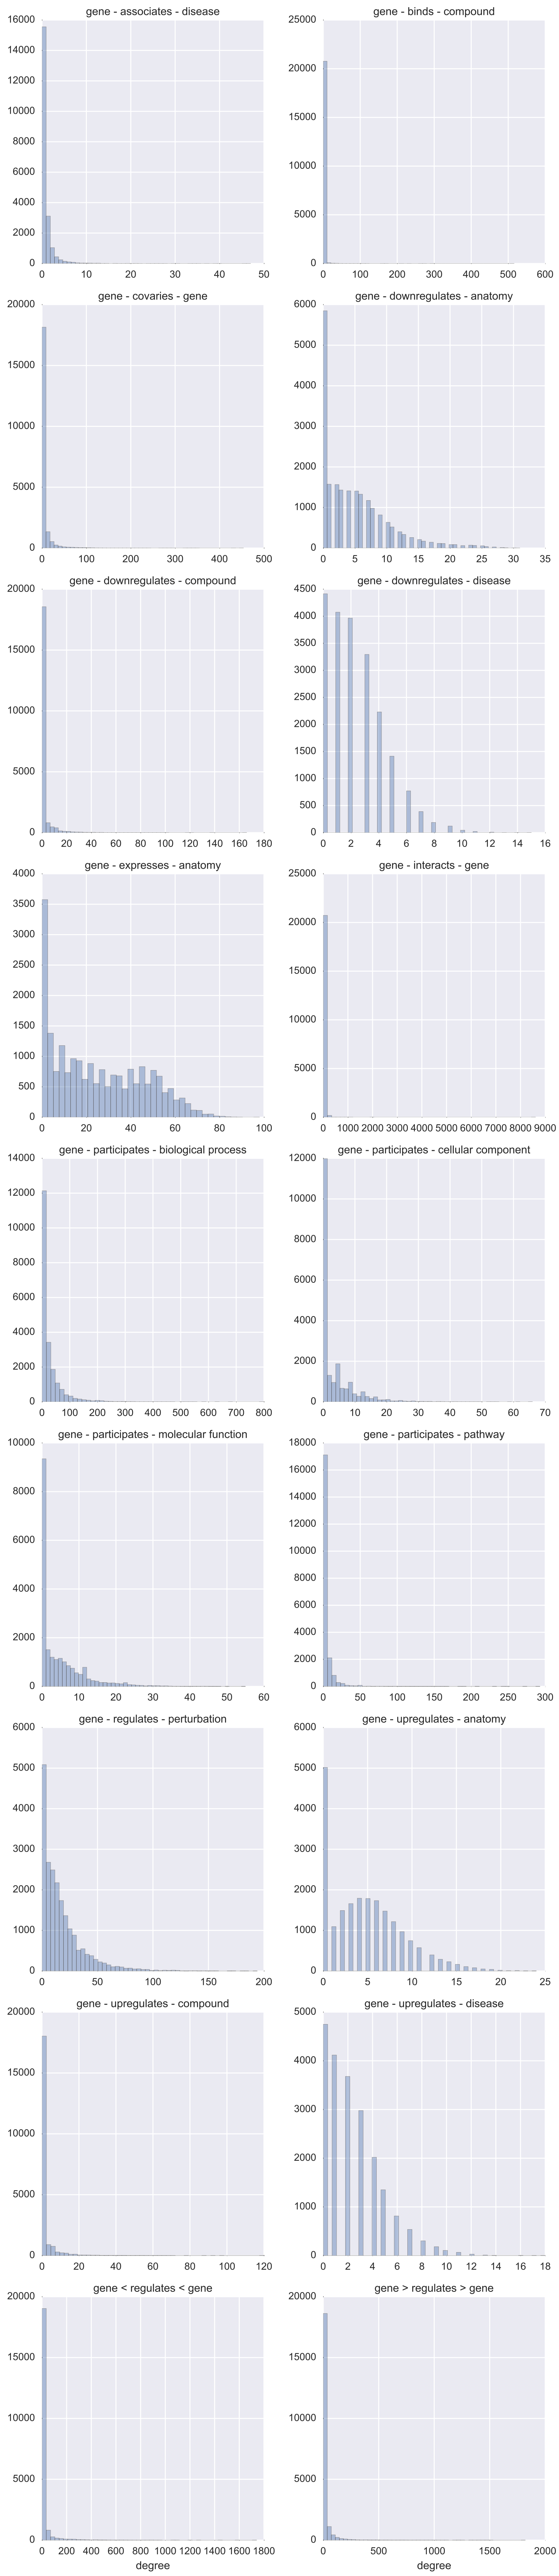

pathway - participates - gene

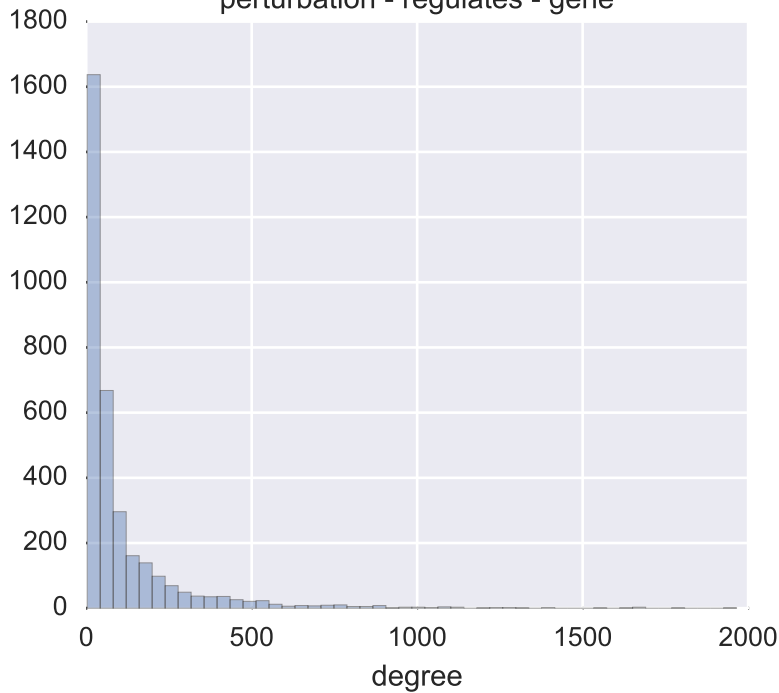

side effect - causes - compound

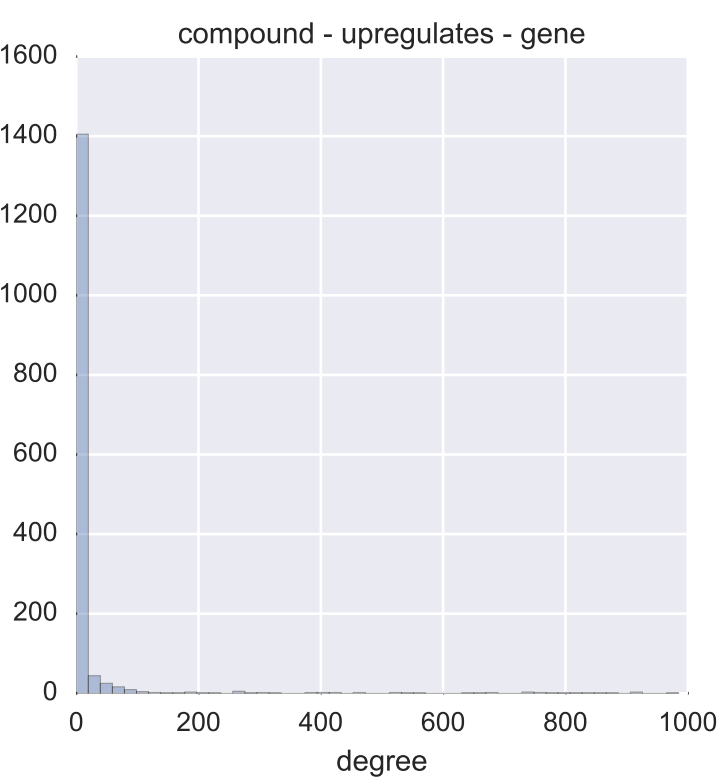

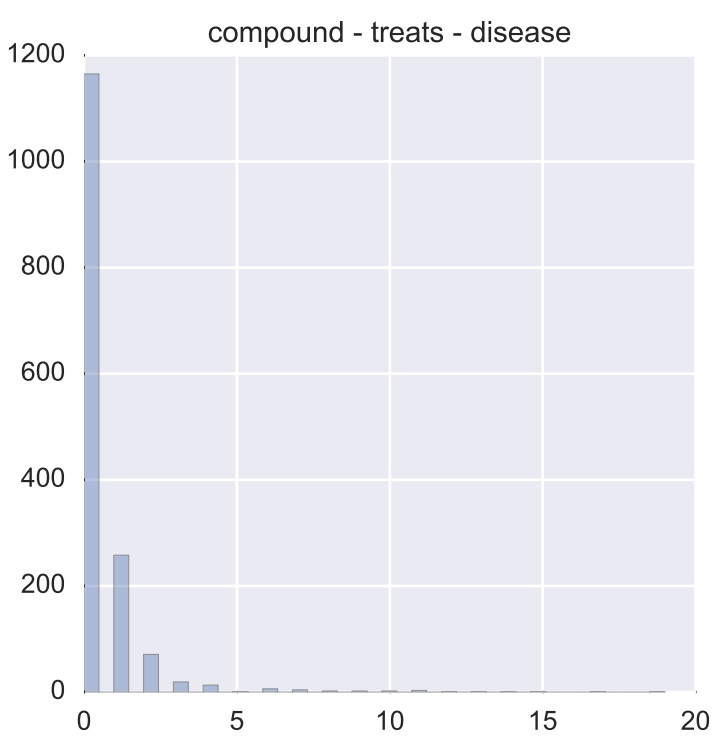

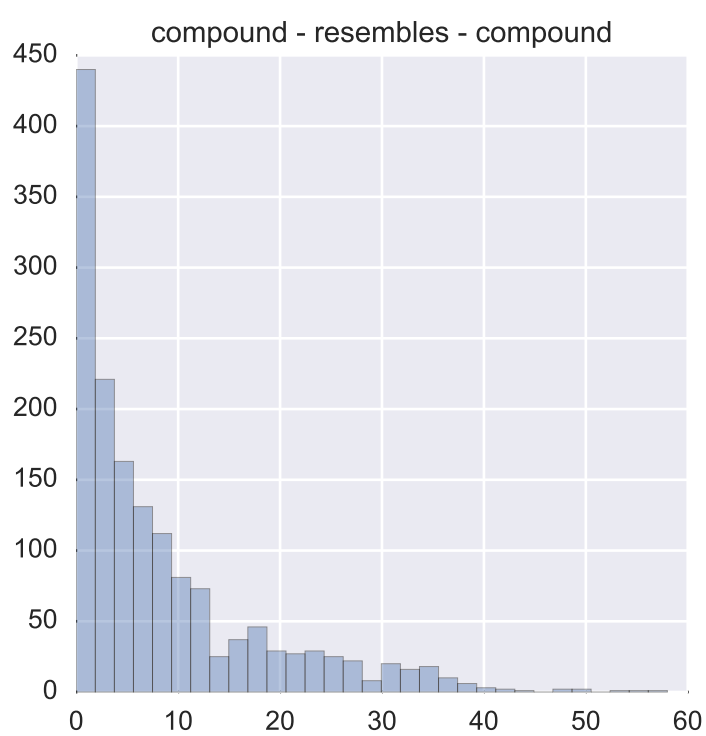

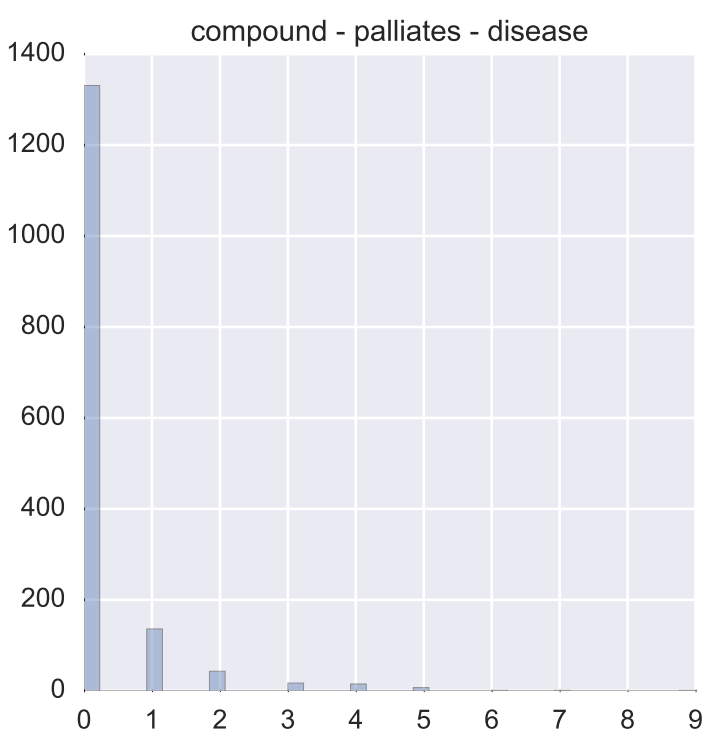

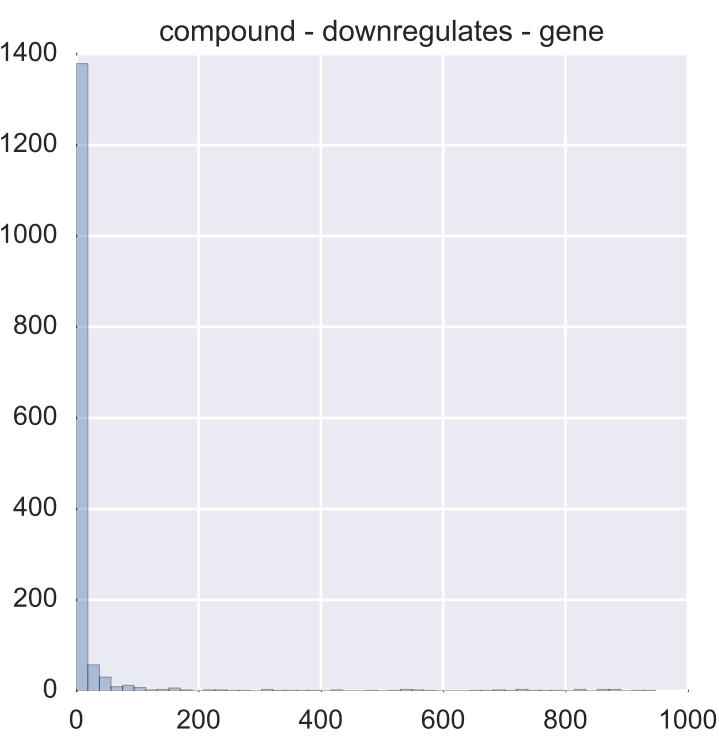

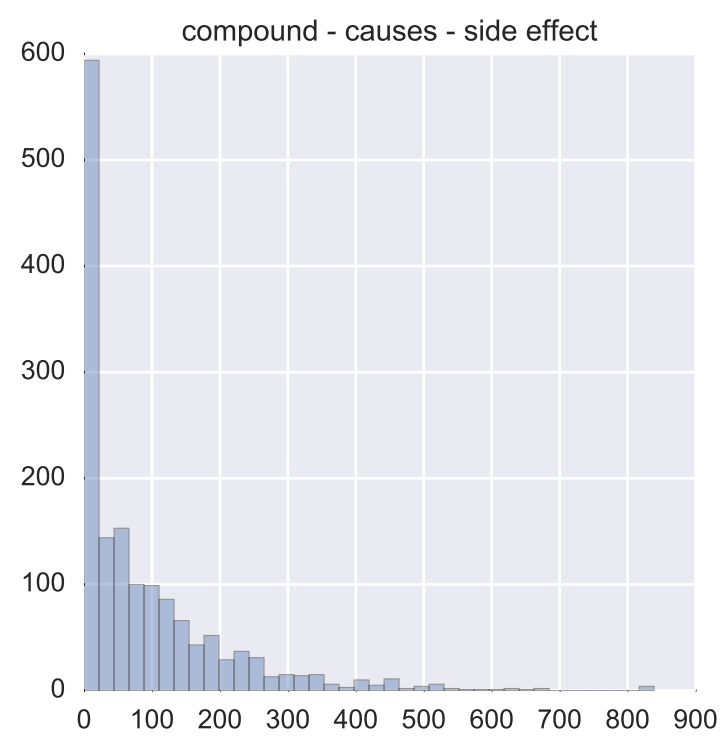

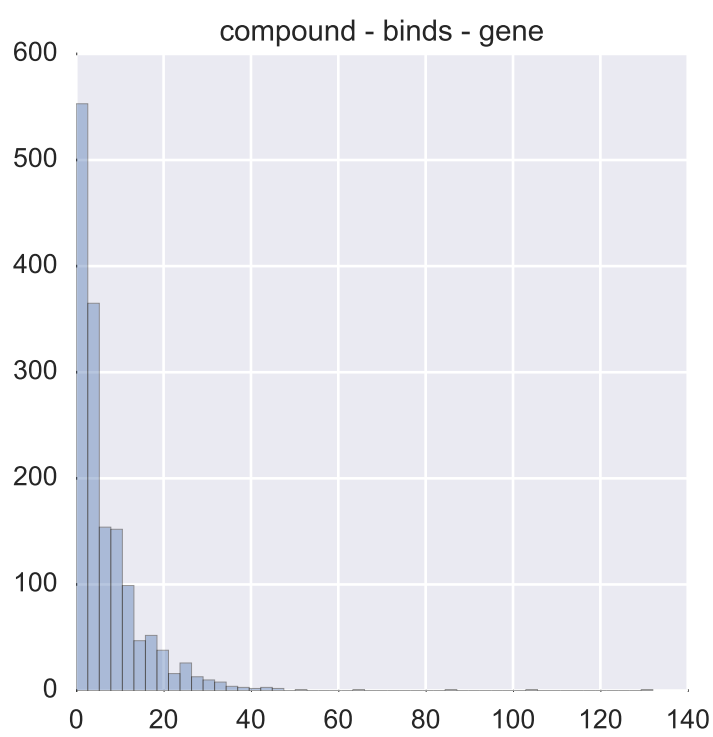

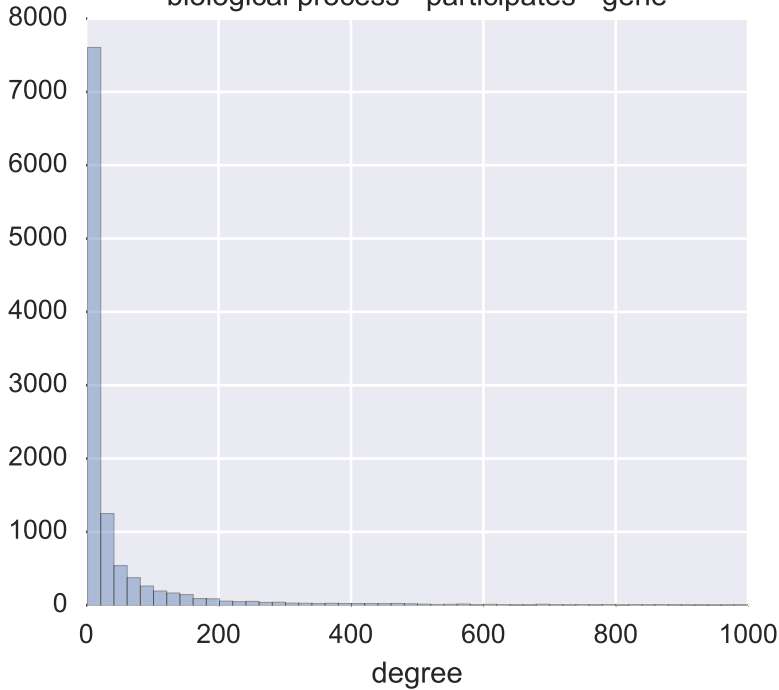

perturbation - regulates - gene

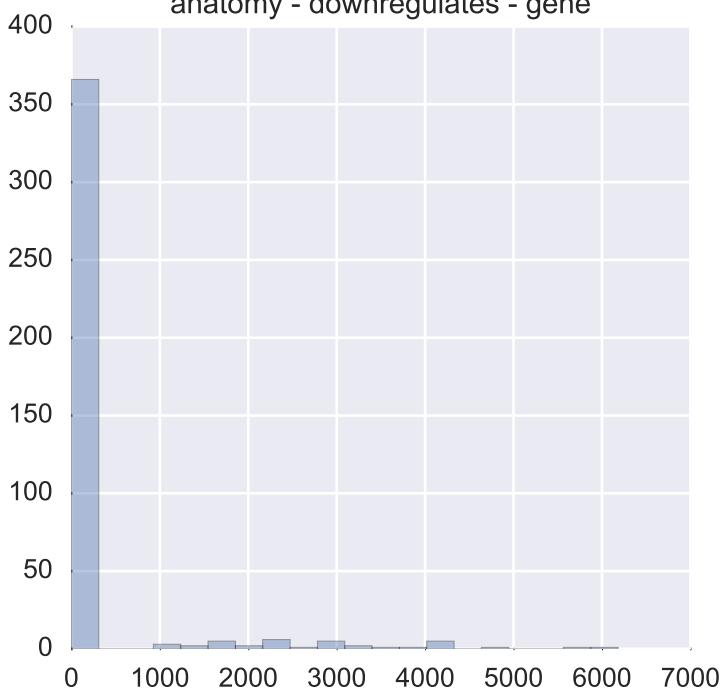

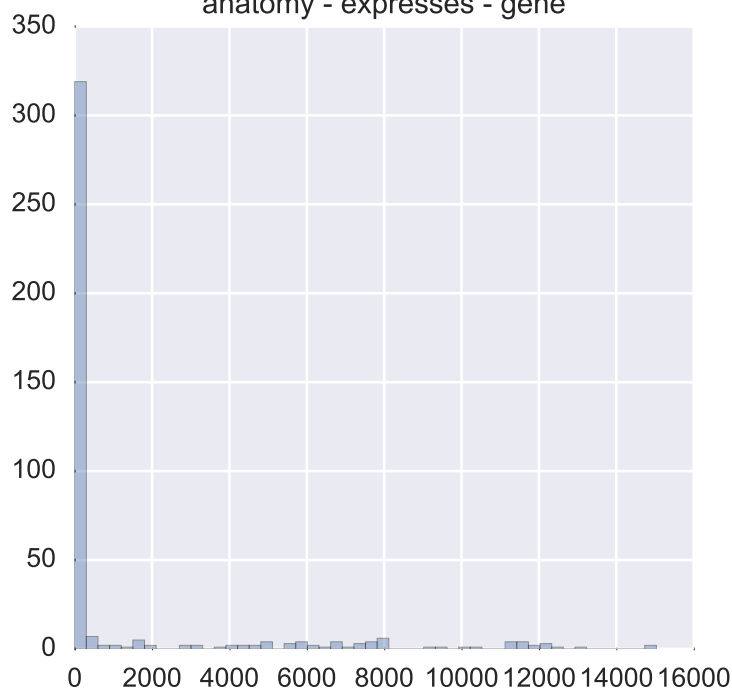

biological process - participates - gene

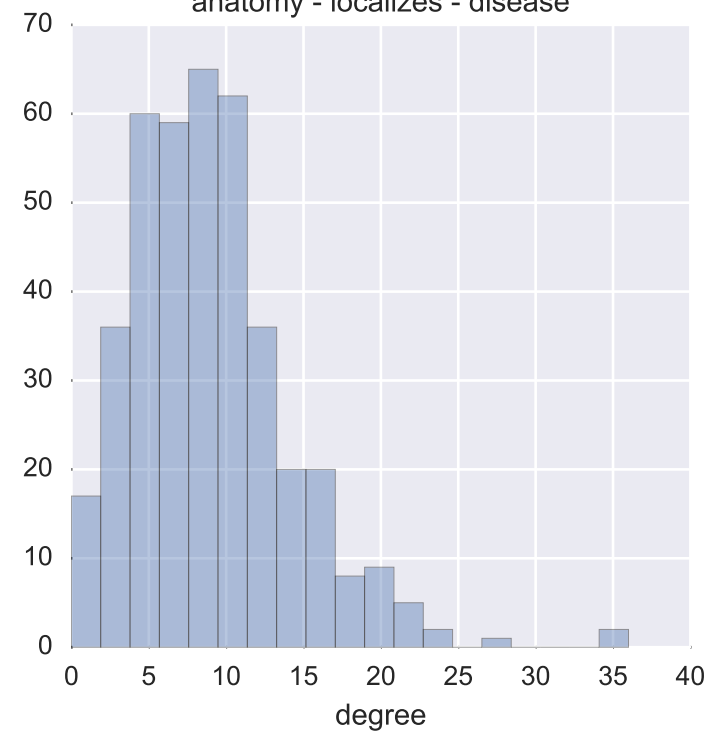

anatomy - downregulates - gene

anatomy - expresses - gene

anatomy - localizes - disease

anatomy - upregulates - gene
